

# Manage Google Sheets with Python

wpc

2025 年 5 月 3 日

## 1 Getting setup

1. **Create a new project:** [the Google Developer Console](#).
2. **Enable Google Sheets API:** [APIs and Services](#).
3. **Create Service account:** [Credentials](#).
4. **Manage service accounts:** [Manage service accounts](#).
5. **Create JSON key:** Click on a service account and then select “Manage keys.” Then, click on ADD KEY.
6. **Copy email address:** Copy the service account’s email address.
7. **Share file:** Go to the [Google Drive](#) and share the file with the service account’s email address.

## 2 Get to coding

Now you can use the `gsread` library to access your Google Sheets, like so:

```
1 import gsread
2 spreadsheet_url = ''
3 gc = gsread.service_account(filename='account.json')
4 sh = gc.open_by_url(spreadsheet_url)
5 worksheet = sh.sheet1
6 print(worksheet.get('A1'))
```

Note: `account.json` is the key file you downloaded in the previous step. `spreadsheet_url` is the link to your Google Sheet.
